Diagram exchange — file exchange format used by AutoCAD that allows exchanging design and engineering documents. It is often used to exchange drawing information between different tools that use the AutoCAD drawing exchange format. Community support Autodesk provides CAD and engineering software products, including AutoCAD, through a subscription model. After subscription is purchased, the software is also licensed per user. The user can have a single login account and use it to log into all installed software in the entire organization. A subscription can include the use of a single license for all licensed users within a company, family members of an employee, or a team of users, such as engineering or architectural teams within an organization. paid for; the free software is available as public domain software under a license that allows non-commercial use and distribution, but does not allow re-distribution. AutoCAD is still manufactured and marketed by Autodesk, even though they also support licensing for Autodesk software via a "Unified Product License" through their subscription model.

AutoCAD and Subscription Services AutoCAD only supports subscription through Autodesk's ecosystem. As of December 2018, AutoCAD Subscription Services and Autodesk Exchange Apps are the only AutoCAD apps that are subscription based. AutoCAD is not subscription based via the AutoCAD Store, as the software itself is freely available. There is no software charge for a one-time use AutoCAD license, but the subscription model provides various benefits such as upgrades, access to technical support, and better software. Subscription to AutoCAD allows for two different subscription tiers: Online/Cloud or On-Premise. A typical On-Premise subscription will have the ability to upgrade from previous software versions, while an online subscription will provide access to new features but not allow upgrades. Unified Product License On December 17, 2017, Autodesk announced the availability of
