Listing 1. AutoCAD 2.5 User Guide (Top View) Figure 1: The top view of AutoCAD is similar to that of a desktop CAD application. The screen can be divided into two panes, with the drawing on the left and its own windows for functions and palettes on the right. Figure 2: The top view in AutoCAD can be further divided into three panes. The drawing is on the

left, and the other two panes contain context-sensitive windows that provide various types of information. Figure 3: The top view in AutoCAD allows the user to view the drawing from different angles, such as the position or orientation of the paper. The drawing can also be viewed from three different perspectives. Figure 4: The top view in AutoCAD contains the drawing area, workspace, and

palettes. Various tools are available for modifying the drawing, and an interactive workspace that provides additional functionality is also available. Figure 5: The top view in AutoCAD allows the user to work with external references, such as images or tables. Using tools, users can also export the drawing for additional editing. Listing 2. AutoCAD 2.5 User Guide (View Tab) Figure 6: The View

tab in AutoCAD provides a different perspective on the drawing. A perspective with a given angle and scale can be saved in the drawing for use at any time. 2D Drawing Scenario: How is AutoCAD different from a drawing system? A drawing system is a software package that enables you to design a 3D model. To be a useful tool, the drawing system must be able to model and visualize the model. With an AutoCAD drawing system, you create a 2D drawing that contains both the model and

the 2D sketch view. The 2D drawing can be shared with other users or sent to a print shop. You can also create 3D drawings that show the model with the 2D sketch view. In contrast, a 2D drawing within a software application like AutoCAD is only a 2D sketch. It's purpose is to capture the 2D layout of your model or a sketch of your model. You can add the 3D model to your 2D drawing, but only by using the 3D

modeling tools. When creating your 2D drawing, use the drawing tools to draw the model and/or sketch. While you are editing the model, your changes will appear in the 2D sketch view. When you are ready to finish the drawing, either by printing the drawing or exporting it for other purposes, choose File|Send 2D Drawing to Model View,
