Version Download link.foxit phantompdf business 8.2.2192 multi-net.torrent.1. Field of the Invention This invention relates to a system for transmitting data over a telephone line and for selectively signalling the same data over the telephone line. In particular, the present invention relates to a system for communicating voice data over a telephone line and to selectively communicating signalling information over the telephone line to control the voice data. 2. Description of the Prior Art Communication systems utilizing the existing telephone network infrastructure are well known in the art. Typically, these systems are used for providing telephone service over multiple channels of the telephone network. In one known communications system, called multipoint control communications system or Multi-Channel Advanced Intelligent Network (M-AIN), signalling information over the telephone network is controlled by a processor which is capable of controlling various processes required to establish a communication session, such as dialing the telephone number of the party being called, looking up an address of the party and connecting a call to an electronic address book to obtain the telephone number of the called party. The processor is typically referred to as a Service Control Point (
