A: In your code you should make sure to sanitize any user-provided information, not just the data coming from the database. Also, you might want to sanitize that user-provided data too. Have a read of the OWASP page: Additionally you should consider the Cross Site Scripting (XSS) risks. Finally, you might want to consider using JSON instead of XML for the data you are sending. The present invention relates to a new and distinct cultivar of Hydrangea arborescens 'Kakegawa' that is grown as an ornamental shrub for landscape use and for use in the gardening industry and which is listed in current literature as 'Miss Spruce' or 'Nana'. The new cultivar 'Kakegawa' was discovered as a chance seedling. 'Kakegawa' is a selection from plants of Hydrangea arborescens identified as 'Miss Spruce' or 'Nana' (unpatented in the U.S. as 'Nana') in a cultivated area of Japan. 'Miss Spruce' or 'Nana' is a miniature hydrangea plant with dark green foliage and that flowers from spring to fall. The parent or seed from which 'Kakegawa' was selected has been maintained and propagated by vegetative cuttings. The selection was selected in 2008 in Japan and has been asexually propagated from 2012 to 2013 at the nursery of Givaudan SAS, Parc de Forêt du Fontainebleau, 620 Rue des Acacias, Villers-Villeneuve-sur-Lot Cedex, France and has been found to retain its distinctive characteristics through successive asexual propagations by vegetative cuttings. f30f4ceada
