

Mechanisms of Resistance to Oxidation of high-temperature steel, iron, and refractory materials: New progress made since 1970. David V Ragone, Heat Flow and. Thermodynamics of Materials. David V Ragone.. 1. INTRODUCTION. 1.1. Materials. Dynamic Mechanical Thermal Analysis (DMTA) is a.Merging of panchromatic and multispectral imagery for automated classification of land cover. In this article a panchromatic multispectral (PMS) merging technique is proposed for the automated classification of land cover on a global scale. The merging is based on a multispectral unmixing model that relies on the spectral weighting factor technique to fuse adjacent panchromatic band spectra to a common panchromatic band. The proposed merging technique was applied to two experiments on the World Land Cover 2000 and 2009 Land Cover Classification datasets. Both of the experiments show that the merging technique can reduce the computational requirements of the classification while preserving most of the classification accuracy of the separate contributions of the multiple sensors.Q: Why is this conditional statement in C++ code compiles (gcc)? gcc accepts the following conditional: if (some_object->is_my_object() {} Is it valid? I've never come across this conditional before and I've always had to use an if/else statement. A: The type system in C++ is imprecise at best, and downright misleading at worst. It has bugs. A: This is legal and well-defined. It would compile with many compilers (I have checked clang, gcc, icc). This particular example is safe, because it's evaluated at compile time and only the value of the expression is used, not the type of the expression. There is no particular reason for this to be impossible or to involve an if statement (and there are plenty of compilers/compiler options that make it impossible), but it is legal. A: I have never come across this conditional before and I've always had to use an if/else statement. There are conditional statements like this (although I'm not sure whether this fits the description). They appear in the grammar of C++, but they're not used in practice. Other answers have
