It also informs you about new bugs. It's strange, but the user interface still looks like it is from the past millennium. Windows Vista has many innovative features, but

there are also those that are of very little interest to modern users. In this video I will show you what is new and how to manage it.

Windows Vista - The Big Changes for You: =====

=====

Vista's interface is a big change and not in a good way. We no longer have a system with a taskbar and an explorer window,

but instead you are in a world of small icons and short windows. You can now customize the taskbar and the explorer: Change the size of the icons, the order of the windows, customize the toolbar and change the theme and the transparency of the windows. Never be rid of the traditional start menu: You will find the menu icon on the system tray in

the same position as in Windows XP. The options are just the same, but now they are a bit more modern. In this video I will show you how to manage your speakers in the game. You will find instructions on how to choose speakers and adjust the volume. Videogameround is the world's largest video game news website, featuring daily video game news
