AutoCAD is used for 2D and 3D drafting, design, visualization, and documentation. It is a tool used to create 2D and 3D construction drawings. It is used in the telecommunications industry, for civil engineering, transportation planning, architecture and construction projects. AutoCAD uses raster graphics to store information, instead of vector graphics. Vector graphics is better at storing a representation of an object, like a drawing of a bicycle. Vector graphics can be used to represent an object, so that it can be moved, copied or otherwise manipulated. With a raster image, only the lines and shapes, and their colors, are stored. The image is generated using a rasterizer, a device that scans the object and converts it into a raster graphic. After the image has been created, the data can be manipulated with filters and other CAD tools. When the object is complete, it can be sent to a printer or displayed on a computer screen. Vector graphics have several advantages over raster graphics, including that they require less storage space, can be scaled infinitely and do not lose quality when resized. With the release of AutoCAD 2016, AutoCAD is an object-based CAD application that runs on Windows, macOS, iOS, Android and the Web. The different kinds of objects in AutoCAD are: Objects (create, save, and open) Drawing objects (layers, shapes, dimensions, text, annotations, blocks, and dimensions) Document objects (text, image, legend, page setup, and object properties) Format objects (grids, tables, grids, grids, and pages) Linked objects (image annotations, dimension guides, etc.) Symbols (symbols, attribute objects, template objects, and event objects) AutoCAD is similar to other CAD applications like CADDesk. AutoCAD is preferred over other popular CAD applications because AutoCAD is not only multi-platform compatible, but also the software can be installed and run as a desktop app. Most CAD software available today runs on only one platform or requires a third-party plugin or application to run on another platform. The AutoCAD 2016 application is currently used by 4 million users all over the world. AutoCAD is the most popularly used CAD application. AutoCAD 2017 is just going to be released this month.
