The usage is simple, since you just have to press the user-defined key combination to toggle between English and Indian keyboards. The installer version is available here.Q: Does configuration have to be done in app.yaml for a Cloud Endpoints app? I have a simple endpoint definition (in app.yaml) that is serving up a post-request. I do not see the source code for this app in the index.yaml file, as is required by the documentation. If this was a regular app, I'd imagine that I'd need to add some imports to my models.py file, such as: from core.data_service import UserDataService Is the same requirement true in the case of an app with a Cloud Endpoints definition? A: Yes, Cloud Endpoints applications need to do two things. First, they must be annotated with Google.Cloud.Endpoints.V1.Beta.APIClient. An example of how to do this is in the Cloud Endpoints documentation. The second thing they need to do is import the modules they need from google.appengine.ext import db and google.appengine.ext import logging. So in your models.py, you would import the db module and log module (maybe). The reason the docs say "The first thing that your application needs to do is import the modules in the modules_directory file" is that without that, there's nothing for the client library to do. If the file modules_directory exists, the client library is able to successfully generate the appengine_api.yaml file. In recent years, the popularity of digital still cameras, video

cameras, cellular phones, and other electronic devices with image capture capabilities has exploded. In many of these devices, images are captured as digital still images or as digital video. The images are stored in memory or on a removable media and may be viewed on the electronic device with a display. Many electronic devices with image capture capabilities include a user interface that allows a user to easily capture and view images. For example, many of these electronic devices may include a touch-sensitive display that can

The installer version is available here.On this weekend's broadcast of "Fox News Sunday," Florida Sen. Marco Rubio, R-Fla., said President Obama's "birtherism" about his birthplace will not help him in next year's presidential election. "He's got to prove to me that he's not a Muslim before I can possibly support him," Rubio told Chris Wallace. Rubio said that the matter of Obama's birthplace is "a distraction" from the issues facing the nation. "It's a distraction from our challenges. Whether it's jobs or the economy. Whether it's national security. Whether it's getting our spending under control. Whether it's fixing our broken immigration system," he said. "It is a distraction. And I think it's actually a dangerous distraction for the president," Rubio added. Watch the full interview: Q: Set getCurrentPosition to stop at desired position I have a set of values that I can use to control a getCurrentPosition() query. I need to set the function to stop at the point of where I want to have it stop. I cannot find a way to do this. My code: function onSuccess(position){
