AutoCAD Architecture AutoCAD Architecture is a sub-app for AutoCAD that is dedicated to building construction. Architecture is a very detailed and time consuming process. As a result, a number of specialized programs and AutoCAD applications have been developed to tackle the process. AutoCAD Architecture allows designers to create, edit, view, and publish three-dimensional information for the design of buildings, complexes, and other large structures. It contains a variety of utilities that aid in the design of buildings and the detailing of their parts. The major uses of AutoCAD Architecture are for the design of: Building Site Design Utilities Structures AutoCAD Architecture uses the IFC (Industry Foundation Classes) standard for interoperability with other software and file formats. The construction of designs can be done by linking the information created by AutoCAD Architecture to other entities and information contained in different software packages. The design information can be created and linked to data in the following software packages: Civil 3D EnergyPlus MEP (Electrical) MEP (Energy) MEP (Fire) MEP (Thermal) PowerDesigner PowerDesigner - Architecture PowerDesigner - Electrical PowerDesigner - Fire PowerDesigner - MEP - Architecture PowerDesigner - MEP - Electrical PowerDesigner - MEP - Fire PowerDesigner - MEP - Thermal Revit Revit - Architecture Revit - Electrical Revit - MEP - Architecture Revit - MEP - Electrical Revit - MEP - Fire Revit - MEP - Thermal Visual LISP Visual LISP - Architecture Visual
