These classes are included in a unified hierarchy, and support the creation of object references for reuse in other parts of a project, and can be linked together. In 2015, AutoCAD released native support for JavaScript, a language that was previously only used for Internet Explorer scripting. Unlike JavaScript, AutoLISP is integrated into the main programming language for AutoCAD. Industrial standards support AutoCAD is open source, and has extensive support for industrial standards. The development of standards for AutoCAD was started in the mid-1990s. These included the development of the DXF file format, the first version of which was released in 1997. The DXF was later ported to XML. AutoCAD also supports the DGN and SLD standard formats, which were originally developed by the CADD Group. The SLD format supports the display of colors, patterns, fonts, and images. DXF The DXF file format is a specification that defines the representation of drawing files used by AutoCAD, originally developed by Autodesk for AutoCAD in the 1990s. DXF stands for Data Exchange Format. It is an industry standard in part because of its commonality with the AECON format, which is used in British construction sites. The DXF file format has the following attributes: ASCII Encrypted (optional) Contains BOM Unicode Multi-page Supporting multiple formats (e.g. AutoCAD and DWG) AutoCAD 2000 supported the DGN, SLD, and RAS 5b5f913d15

Drawings embedded with the markups now appear in external editors, like Google Docs, and the markups can be linked to other parts of the drawing. (video: 0:53 min.) Rapidly switch between your designs and the markups. Use the Show Markups button to switch between the drawings or reveal the markups without automatically changing the drawing. (video: 0:53 min.) Quickly explore the changes you've made to your design and incorporate the latest changes and improvements in your drawing. (video: 2:28 min.) Note: AutoCAD does not currently support markups in other applications such as Google Docs. Custom Workspaces: A new Custom Workspaces option now appears when you right-click in the drawing window. Custom Workspaces let you create custom layouts of the window and tab bar to match your preferred style of working. You can now select a favorite layout from the AutoCAD Custom Workspace configuration panel or create a new one. Xref and Calc: Now you can generate cross-references between two drawings and access the generated cross-reference number within the source drawing. This is useful for reference and control of references to the drawing. Under the same circumstance, you can also use Calc to generate a number for reference in the target drawing and access it in the source drawing. If you generate a cross-reference number in the source drawing, you can use this number to generate another cross-reference in the target drawing. You can also use this number to edit the existing reference and update the source drawing with the latest version of the reference. Calc now displays a panel with only the results of the calculation. To view the complete calculation, click View Calculation Results. Interface Settings and Configurations: You can now select between three settings for the cursor to control and customize the appearance of the cursor. You can display the cursor in the drawing window or the ribbon (or both), hide it when it is inactive, or always hide it. You can also choose between using the standard black cursor or a colored cursor, or display a transparent cursor. More Control over Visual Styles: In earlier versions of AutoCAD, the color and line width of visual styles could not be edited. To alter the color or line width of a visual style, you could use the Visual Styles panel (under Edit Visual Styles
