Alcohol, although a risk factor for cardiovascular disease, has beneficial effects on the functions of both low-density lipoprotein (LDL) and high-density lipoprotein (HDL) and hence its role in the development of atherosclerosis is not clearly understood. This study investigated the effects of alcohol on HDL structure and function by comparing the effects of ethanol and methanol on HDL cholesterol efflux capacity and scavenger receptor (SR)-AI expression. Serum and HDL cholesterol levels were determined and HDL was isolated and characterized by gel chromatography. HDL cholesterol efflux was determined by the acceptor-dependent cytofluorescence using Chinese hamster ovary (CHO) cells with the SR-AI gene expressed. The expression of SR-AI on the surface of HDL was determined by Western blot. Methanol, like ethanol, increased serum cholesterol levels significantly. HDL cholesterol efflux capacity was increased by more than three-fold in ethanol-fed groups compared with controls. Moreover, the expression of SR-AI on HDL was significantly increased by ethanol. The major amount of HDL cholesterol consisted of a smaller particle with a slower electrophoretic migration than HDL3 particles. Plasma lipoproteins can be divided into HDL subpopulations of distinct sizes, functions and compositions, differing in their metabolism and metabolic risk factors. These findings further the understanding of the mechanisms by which alcohol beneficially affects HDL function.Q: c++ friendly array parsing The problem is, if you have an array in the form [0,0,0,0,0,0] or [0,0,0,0,0,0,0,0,0] it doesnt recognize it as a double dimensional array. So what can i do to get it to recognize a string of a dimension 5 as a double array? A: This is a difficult problem, and was in fact a
