

developer of affordable data visualization software and .NET Framework. On his account there are already many inventions that find their application in various fields of activity. The senior programmer has not only numerous patents, but also many years of experience in various companies and on software development. He has awards in areas such as the aerospace industry, the SETI project, as well as in the field of consulting. In addition to his scientific research, Weatherby is involved in software development as a co-founder. Recently, he presented several tools for visual presentation of data, as well as public demonstration of his developments. The most popular are its products designed for visual publication of data on the Internet. These programs allow you to create interactive atlases and interactive maps, with a good representation of the real volume of arable land. Recently, a product was introduced that allows you to call popular browsers on the desktop and run applications with popular engines in a few mouse clicks. The UTag and UInput tools are popular for their simple interface and functionality. By default, some elements of previous versions of the program are included, and new ones support image scaling. The visual editor UTask has a description of plug-ins for other applications on the site and a site describing the new version of Uinput. In addition, the site has, in fact, a regular windows client for working with UTash, but with a plugin that allows you to work with Utag using the screen. The full source code for all three Utash and Uinspect products is available for download on the site. There is an opportunity to test new components. Also, the user interface of the developer is available for viewing. All in all, Utaxi Manager is a database visualizer tool built on top of Utari/Textrix SQL Alchemist. He understands almost all DBMS, and, in most cases, can work with them. Upon launch, Utaxi Manager automatically detects the operating system and displays images for each table in response. There are tools for creating a graphical representation of the data. For example, you can choose different font options, and the user can configure many other parameters for each column. Also, depending on the operating system on which the computer is running, about 30 types of tables can be displayed. K1U displays the results of expert analysis for each group, taking into account the current level
