None Base: Bytes Upper Case: 10 Lower Case: Point Separate: comma Format: Currency What is Needed: That which I have left to do is to create 1, 2 or 3 versions of the Decimal Symbol application and the following part in the Motion Control Software: Need to explain the customer how to change the decimal symbol. - Check the decimal symbol that the program has set when the software was started. - If the decimal symbol is wrong, you must change it. - The German and French versions have the same problem. - If you set the decimal symbol to a comma, your decimal symbol will be displayed with a comma. All versions of the decimal symbol application will be attached to this forum. Thank you very much for your interest in my project. In a few days I will have finished the Decimal Symbol Demo. It is going to be distributed in the next couple of days. The Decimal Symbol Demo was made with Visual C#.NET 3.5 Winforms. I have tested all types of the decimal symbol and several other types including the European, American and none symbol. It turns out that the European symbol is only corrected by unchecking "Use numbers without decimal" in the decimal symbol application. If the option is unchecked, the decimal symbol will set to the American symbol (point). If you have already uncheck this option, you must be aware that Windows have many applications, which change the decimal symbol. In the Install Shield the option Use numbers without decimal is set. Btw, I have noticed that the decimal symbol application does not work for all applications. Some of them have wrong decimal symbol set already. But if you go in the preferences of the application and uncheck Use numbers without decimal, the decimal symbol changes to the right symbol. On most computers you do not need to change the decimal symbol. Well, I have also made an application with the Pointer decimal symbol. This program cannot set the decimal symbol. So, I can only tell you that the decimal symbol must be changed. A variation of "Decimal Symbol with comma" is available. The decimal symbol with the comma works only for the German language, of course. The Decimal Symbol Demo will be added to the application center, too. The Decimal Symbol Demo was an experiment. The next time I will write an application that can change the decimal symbol.
