Ad in the CAD software community, AutoCAD is a standard and popular offering, in particular for architects, engineers and graphic designers. There are numerous types of AutoCAD variants, including AutoCAD and AutoCAD LT, which are for commercial, home use. AutoCAD LT is a lightweight, multitasking alternative to AutoCAD, for users who do not require the features of AutoCAD, such as the drawing and layout tools, features and functions. There are many applications that work in conjunction with AutoCAD and enable additional features and functions. Some of these CAD applications can be purchased as a standalone app or as part of an AutoCAD package. CAD packages are bundled with AutoCAD for the purpose of controlling multiple AutoCAD drawings. Although AutoCAD is a popular CAD tool, it is not the only CAD software. The market is dominated by software packages such as Catia, Solidworks, AutoCAD and SketchUp. A handful of other software packages offer CAD and other services, for example, Orbis, Creo, PTC Creo, MSC, Mitsos and TurboCAD. There are numerous software packages that allow the user to draw and edit the shape of a model. These types of programs are used to plan, design, and draft new items such as parts, items for a construction or vehicle project, and furniture. Among the most popular CAD packages are AutoCAD and AutoCAD LT. These programs are most likely to be familiar to the majority of users. AutoCAD is a general-purpose CAD package that can be used to design almost any object and can help the user draw any type of object. AutoCAD LT is a lighter and less powerful alternative to AutoCAD. In addition to being a bit less powerful than AutoCAD, it is very compatible with AutoCAD. AutoCAD is primarily used to create a model that can then be used to create any type of object in real life. For example, it can be used to create a floor plan for a home, a plan of a building, or a device for an auto mechanic or a bike rider. The objects can be objects for the home such as plumbing and electrical fixtures or devices, items for a car such as a vehicle body, or items for an aircraft such as an airplane or helicopter. There are many other types of products that the user can make.

Field of the Invention The present invention relates generally to a light emitting diode (LED) package, and more particularly to a LED package with a suspended substrate. 2. Description of the Related Art LEDs have recently been employed in a number of display applications, as well as other applications including traffic signals, automobile dome lights, and the like. In many applications, the LEDs are mounted on a printed circuit board (PCB), which can increase the light-transmission efficiency and the visual quality of the final product. The use of LEDs in such products, however, is subject to various limitations. First, the current flow in an LED is lateral, i.e., along the plane of the LED. Thus, to ensure that the desired light is emitted, a structure ca3bfb1094
