AutoCAD is used by businesses, architects, engineers, drafters, and other people engaged in drafting and design projects. Using AutoCAD can save time, produce accurate drawings, and improve the visual communication of ideas and information. Compatibility Issues AutoCAD supports a variety of computer systems and versions of Microsoft Windows. For general information regarding compatibility issues, see Compatibility Issues. Table of Contents Elevation AutoCAD renders an object as though it were raised from the screen. This technique is used for adding depth to objects. There are three types of objects that can be elevated: Drafting objects. Drafting objects are those that are not displayed as black lines on the screen, and thus have no appearance. These objects are displayed on a separate page within the drawing, which is called a drafting page. Because all the objects on the drafting page are elevated, they are usually blacked out on the screen. Point-or-line drawing objects. A point-or-line drawing object is one that has a specific shape (a point, line, polyline, circle, ellipse, polygon, or polyline) and is displayed only on the screen. Examples of such objects include pushpins, the table option, and text. Drawing objects. A drawing object is one that is displayed on the screen, and thus is not elevated. Examples of such objects include lines, arcs, surfaces, splines, text, and other objects. While the objects on the drafting page are shown as they would appear in 3D, any objects that are not on the drafting page are placed on the screen as if they were elevated. Elevation is also used to easily change the elevation of any object. Objects that are not on the drafting page are not elevated. Objects on the drafting page are elevated to the elevation of the elevation key, but remain in their current placement on the drafting page. Important: If you want to work with the drafting page while the drawing is in edit mode, you must leave the edit mode with a double click on the drawing objects on the drafting page. The CTRL + [elevation] and CTRL +] elevation] keys work as described in the first two table entries

AutoCAD Architecture is an AutoCAD plugin that allows users to customize an AutoCAD drawing to allow them to work on different sections of a drawing, instead of having to open each drawing and do their work in a separate drawing. Visual LISP is an AutoCAD extension technology, allowing users to add visual objects to a drawing, such as lines, arcs, circle, etc., and provide dynamic user interface features. Visual LISP is supported in AutoCAD LT and AutoCAD MEP. AutoCAD LT and MEP have the same functionalities. Visual LISP was first developed by 3Dsonics, Inc. in 1990. In 2001, Autodesk acquired 3Dsonics and its Visual LISP technology. In 2003, Autodesk acquired Omniplan, the creator of Visual LISP and the documentation of Visual LISP was moved to Autodesk's web site. In 2004, Autodesk acquired Creo Modeling Software, which adds a visual scripting language to AutoCAD. This language was released as Visual LISP. It is similar to VBA in Visual Basic for Applications, ObjectARX in.NET and XML (Extensible Markup Language) in the XML Tools or CAD Tag Editor. Visual LISP is an IDE (Integrated Development Environment), which means the user can work with their drawing using Visual LISP. Visual LISP is an extension language and can be used within the drawing itself. Autodesk Architecture is also used as an extension technology to add new functionality.
