Ubuntu 13.04 will have the final snapshot before the Developer Release. The RC is out there already and everybody is downloading it, testing it, reporting bugs and generally enjoying it. Somebody from Canonical will release the final version in the next hours or days (we probably don't know exactly when because we are not Canonical). This is a great release and I'm sure that many of you will like Ubuntu 13.04 Saucy Salamander. Some bugs need to be fixed in final release so fix or ignore if you prefer. Although Ubuntu 13.04 is ready for the final release, Canonical have not yet given the date for its release. Brian Murray, Canonical's community manager hinted that Ubuntu 13.04 release will be out on 23rd or less. Since Google just calculates the Jaunty/10.10 release date as 30th October 2009, I take this cue as an indication to be close. I expect seeing the stable release of Ubuntu 13.04 may take away the pressure for the final release. We may also hear more information about the release and its future. Ubuntu has taken over the space occupied by KDE 3.5 as top window manager for Ubuntu. Launcher, Window manager, Metacity, Compiz, and GTK to name a few, are some features in Ubuntu 13.04 Saucy. The desktop environment is applied to the kernel and running programs. The graphical toolkit for the user interface of running programs is GTK. Ubuntu 13.04 Saucy gives us the best alternative to Windows 7. Windows 7 is well known for its ease
