Click the small box to the right to join our team![unreadable] Impaired liver function and fibrosis is one of the most severe complications of chronic liver diseases. Stellate cells, the myofibroblasts in the liver, are central to liver fibrosis. Therefore, understanding the mechanisms underlying stellate cell activation will help in designing novel therapeutic approaches to retard or reverse liver fibrosis. In particular, we hypothesize that the NAD(+)-dependent deacetylase Sirt1 is a novel inhibitor of stellate cell activation and that its deficiency induces liver fibrosis through its ability to deacetylate histones and microRNA hsa-miR-122. Since its discovery, Sirt1 has been shown to protect cells and animals from several pathological conditions through its pleiotropic functions. While the role of Sirt1 in liver disease, however, is largely unknown, we and others have shown that Sirt1 is abundantly expressed in stellate cells in liver. Furthermore, preliminary data support a central role of Sirt1 in SSc. Given the importance of liver in drug and xenobiotic clearance, Sirt1 deficiency in stellate cells may have significant impact on the clearance of endogenous toxic substances. As a proof of concept, we will first determine the time-dependent changes in the expression of Sirt1 in primary mouse and human stellate cells in response to livers in vivo. Second, we will determine if Sirt1 ablation affects the characteristics of isolated primary mouse and human stellate cells. Finally, we will study the effect of Sirt1 ablation in vivo in mice. These studies will establish a foundation for further investigation of Sirt1 and stellate cell activation in liver disease and fibrosis. Relevance to public health: Chronic liver disease is the major cause of liver transplant and the third leading cause of death in the United States. Hepatic stellate cells, the myofibroblasts in the liver, are the main effector cells responsible for liver fibrosis, the main cause of liver transplant. Studies described in this application will provide a foundation for further investigation of Sirt1 and stellate cell activation in liver disease and fibrosis. What's new:

Incredible Dracula 3: Family Secret is a Spanish motion picture cartoon that features Dracula. The film was released on September 25, 1991 by the Mill Creek Entertainment subsidary of Warner Bros. for the children's television program Tiny Toon Adventures. Plot Dracula returns to a crumbling mansion on Transylvania which is in the process of being sold to a pair of owl twins (Antilons and Malerie) and their lawyer uncle by the name of Toonic (who just announced the return of Dracula by watching a popular television show called Tiny Toons Hour in the mansion's TV set). Toonic is also the former King of Transylvania and, being in a state of depression, is constantly fantasizing about female judges and celebrities while in his bottle of pills, Papatisucree. The evil tutor who is caring for the two twins, Tutu, notices that the "prince" and "princess" seem to be monsters, and after sending them to bed, overhears them trying

to lure a group of Count Kill--the Impaler (who has recently been returned by the Hameke family) into the mansion's library to steal something. Tutu calls the Mayor of Transylvania asking for help, and he goes over to the mansion to help fetch the Dwarfs from nearby Dwarfstan as the mafia has had a problem with them recently. The Mayor brings the Dwarfs (Bruiser, Brucifer, Gilli, Hurricane, Skweeze, and Woodstock) to the mansion to smash the gems until 2:00 in the middle of the night. The Dwarfs wake up the twins and the "prince" starts to explain that he has something to show the Dwarfs, and the Dwarfs travel to the library with the Twins, "prince" and "princess" in tow. After opening the door and seeing the gnarled wooden stakes and the letters announcing Professor Bartholomew Gloating stopping his construction (though this serves to scare the twins and "prince" at the same time), the twins, "prince" and "princess" decide to tell everyone that they are monsters by calling the door and telling everyone to go their way. When everyone grows accustomed to the fact that Dracula is back, the Dwarfs opens a can of beans and the brothers turn on each other with two cans of purple beans. When Dracula produces an explosion of food and drinks, decapitating Toonic and Petoria

If I put the books on my Wisp, does it make the Wisp appear as if I'm carrying the book, or does the Wisp read it in your eyes? I've recently gotten a Wisp and want to add books, but I don't know if I should carry the books on it or not... If I put the books on my Wisp, does it make the Wisp appear as if I'm carrying the book, or does the Wisp read it in

your eyes? I've recently gotten a Wisp and want to add books, but I don't know if I should carry the books on it or not... : My thought as well, but that's a good point too, especially since Wisp's are also extremely magical beings. Would be kind of awkward to carry a book around that's magic/and does magical stuff... then have the book read magically into your eyes. Not a bad idea, though. Instead of carrying, I've had more success just linking books to the Wisp when I want to read a book. #55 > > #7.
