## Adobe Photoshop Portable 7.0.3 Filehippo

This book is for intermediate Photoshop users. Although the beginner may skip some chapters and/or try to complete the exercises, they should be familiar with basic layer usage, color manipulation, and how to use both the Express keys and the menus. If you're an advanced user, this book could fill your computer with more raster files.

**## About This Book** This book does not go into Photoshop-specific information, such as advanced editing techniques, how to manipulate layers in individual layers or adjustment layers, or how to use the Preferences dialog box. If you want to learn about those things, you can get additional help from *\_Photoshop For Dummies\_*, published by Wiley Publishing, Inc., or *\_Photoshop Elements For Dummies\_*, by Bonnie Zirbel (Wiley Publishing, Inc.). This book is about building photo collages and doing some cool art with Photoshop. So it is an exercise in creative manipulation, rather than the design or creative process. There is a large amount of information in this book, so it's organized into different chapters that serve as a basis to build on and make collages. You don't need to read every chapter. Try to use your common sense and common sense software practices when using Photoshop. Also try to learn as much

as you can from other sources available on the Internet, and don't be afraid to ask a computer-savvy friend or family member for help. Photoshop is very powerful software with lots of tools to make your photo editing a snap, and that helps speed up the process. Spend some time getting comfortable with a combination of these techniques and you'll soon have some great collage-making ideas. ##

**Foolish Assumptions** This book assumes that you have experience with Photoshop CS5 or an earlier version. ##

**Icons Used in This Book** Icons are little pictures that give you an idea of the type of information that you may find in this book. Here's a list of the icons used in this book. This icon marks information that doesn't change from one installation to another. It contains information that is not related to the chapter that's being discussed. This icon marks information that is related to more than one chapter. This icon is used to note information that is important in the chapters that are covered in detail. ## **Beyond the Book** In addition to the material in the print or e-book you're reading right now,

1. Technical Field The present invention relates to a printing device and a printing system. 2. Related Art Various kinds of printing devices have been known. In a printing device, the head needs to be cleaned in order to remove ink or paper dust that has adhered thereto during printing and in order to prevent the head from being clogged. For this purpose, it is necessary to periodically check the condition of the head. In a case where, for example, the ink head is used in high speed printing to cause the printing speed to be high, if the ink of the ink head is dried or clogged, the printing is adversely affected and the printing quality is degraded. A method of periodically checking the condition of the head of such a printing device is described in, for example, JP-A-2002-101180. In this case, the condition of the ink head is checked in real time. However, it is desirable to more accurately check the condition of the head of the printing device.

1. Field of the Invention This invention pertains to the art of cooling and condensing fluids and, more particularly, to an apparatus and method for effecting cooling of a fluid in a refrigerated container by passing a low-pressure vapor stream through a condensing coil. 2.

---

Description of the Related Art In the art of cooling and condensing a fluid in a refrigerated container, it is well known to provide a container with a liquid refrigerant coil having an evaporator chamber and a condensing chamber. In order to remove heat from the evaporator chamber, a vapor coolant vapor stream is passed over the evaporator coil. This vapor coolant steam flows by convection from the evaporator to the condensing chamber where condensation occurs and the condensed fluid flows back to the evaporator. The process may be reversed to provide heating of the container. In this regard, the fluid or vapor may be heated by a vapor steam that flows over a heater coil in the evaporator chamber. The heated fluid is then routed back to the evaporator chamber where it flows through the evaporator coil and is finally routed back to the condensing chamber where it is cooled and condensed to a liquid. In order to further improve the effectiveness of this process, it is known to pass the fluid flow in a closed loop and to circulate the fluid through the evaporator chamber in a manner that minimizes the amount of heat transfer to the vapor coolant. This process is referred to as closed loop recycling.

Q: Populate ICollection with Display Templates for Drop down list in ASP.NET MVC I have created 2.cshtml files that i use to display "Quick Search" in front of a grid view in MVC. When the user selects an option in the quick search drop down list, I want to populate a drop down list with all of the items in a specific table, which I have. I need a way to store this in the controller or viewbag. This is what I currently have in my ViewBag in the controller:

```
List jobs = new List(); jobs.Add(new SelectListItem { Text = "Retail", Value = "Retail" }); jobs.Add(new SelectListItem { Text = "Marketing", Value = "Marketing" }); jobs.Add(new SelectListItem { Text = "IT", Value = "IT" }); ViewBag.MfrJobs = jobs;
```

I get an error if I try to access ViewBag.MfrJobs. Why would this be? Is there another way to get the values? This is my first time working with asp.net mvc, and I am not exactly sure how to go about doing this, as I don't know much MVC, just vanilla.

A: The problem is that you need to pass the model for the controller method that your view uses. Your model will have the fields necessary to render the page you're showing. In your case it sounds like the Model is an IEnumerable of Job class types. If you have some parent class that all of your jobs inherit from, then you could also do this:

```
var jobTypes = new List(); jobTypes.Add(new SelectListItem { Text = "Retail", Value = "Retail" });
```

---

```
jobTypes.Add(new SelectListItem { Text = "Marketing",  
Value = "Marketing" }); jobTypes.Add(new SelectListItem  
{ Text = "IT", Value = "IT" }); ViewBag.MfrJobs =  
jobTypes; Then in your view: ) %> As for where
