Change the registry keys Open the registry, and go to:

Computer\HKEY_CURRENT_USER\Software\Autodesk\AutoCAD 2017\ For the key:

“LastExtendedCurveDateTime”, delete all the spaces. Open “Print and PDF” and add a space at the end of “Initial Setpoint”. The parameter to edit is: “lastcurvategridkey”. In the open register:

Computer\HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion\policies\ Open the key: “Raster Printing” and delete the content. Go to:

Computer\HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\policies\ Open the key:

“Power” and delete the content. The parameter to edit is: “lastcurvategridkey”. You have to write the key on the document, and then save the document. This key has no significant impact on the

function of your project, but it can give you some additional information that will allow you to be more precise, and it can be very useful in reporting problems. The problem As mentioned before, it

can happen that the key changes the curvature of the paths. It is an important fact to realize that there are areas of the drawing that can vary their curvature (or not) independently. And this is the

reason why there is not a “fixed” key, but you have to make a test in the area in which the drawing is. If you are certain that the error is the result of a change in the curvature, then you should not

change the curvature. If you use the key and you see the change, you can use the key again to recover your initial data, and then you can import the modified data back. There is no guarantee that

the key will always return the curvature that existed at the start of the project. In some cases, the project is normal until the first instance of the error is detected and corrected. In other cases, the

project changes a lot and the restoration of the initial curvature seems impossible. Our experience The key is usually the only information we have to make
