Choosing a canvas style When you open a document, Photoshop Elements asks you to select a style. This choice determines whether your image appears flat or has 3-D look. Typically, using the regular style works well for most images. The only issue with the regular style is that you can't easily change the look or color of the selection handles that indicate the individual elements on the canvas. If you prefer to work with your image as an object on a flat background, you may want to use the regular style. You can change the look of the selection handles by changing the canvas style. You may also want to create a special canvas style for special photos where it's important that the image appears flat. For example, in a portrait, putting a white background in an image can make the face look stark. In that case, you may

want to put the background on a transparent, black-colored canvas. In any case, you must keep the canvas background as your primary object on the layer. So, if you want the background to be a dark gray, make that as the default color.
