History AutoCAD was originally developed by a research group at the Electronic Computer Center of the Massachusetts Institute of Technology (MITECC) as part of the MIT CAD Group in 1978, and initially named CADisplay. The name was changed to AutoCAD when a licensing agreement was signed with the AutoDesk corporation in 1983. AutoCAD 2 was released in 1988, followed by AutoCAD 3 in 1991. AutoCAD 2 (4D) AutoCAD 2 introduced several features that have since become standard in CAD software. It introduced the concept of the active layer, allowing the selection of a layer to be edited. If a user clicks on a 2D drawing object (layer) in a 3D drawing environment, the user has the option to open the Properties palette by selecting View → Properties. The same is not true for 3D objects. As a result, drawing objects in a 3D drawing environment can only be edited by selecting them and pressing the A key, or by right-clicking on them and selecting Edit Layer. Once the layer has been edited, it can be saved to a new drawing. If an edit is made that does not allow the layer to be saved, it can be reset. Another new feature was the ability to save and reload a drawing. AutoCAD 3 (5D) AutoCAD 3 introduced the concept of the layer lock. The layer lock option is a means of locking the layers in a drawing. A layer can be locked to prevent it from being edited or deleted. When a layer is locked, the corresponding selection line is hidden from the viewport. Locking layers is a more flexible alternative to editing the layer out. The editing of layers is still possible while locking layers, as the locked layers are still visible on the drawing, allowing the user to edit their contents in the same manner as a non-locked layer. The Layer Locking Feature was a very powerful new concept in AutoCAD 3. After creating the first layer and locking the layer, the user could now have every part of the drawing as a separate layer in its own layer group, with each layer being locked separately. With this concept, a user could have a drawing with over 300 layers. This new feature was responsible for the rapid growth of AutoCAD in the late 1980s. The Layer Locking Feature was introduced in AutoCAD 3. AutoCAD 2010 AutoCAD 2010 introduced a new workspace feature called Enhanced Drag- ca3bfb1094
