## What's New In AutoCAD?

Drawing Optimization (preview): Fastly optimize your drawings for common tasks such as filter- or script-based tasks. Drawings are further optimized with the new function "Explore and Unhide". Geometry-based Paths: You no longer need to make any assumptions when creating your paths - directly enter coordinates, and define the rules of the path, e.g. whether it goes clockwise or counterclockwise. The Solid Edge and other applications will be able to make geometry-based paths. "Architectural" Drawing Functions: Save a portion of a drawing for later use in another drawing, e.g. as a template for building parts. The function "Save" has been improved to allow for more flexible settings, and to automatically choose the most appropriate sectioning tool, if multiple sectioning tools are available. This feature can be turned off by default. Architectural Sketches: In a similar fashion to SketchUp's architectural tools, AutoCAD 2023 will allow you to generate 3D models from 2D drawings. Create 3D models from a 2D drawing. Insert the CAD viewer or the 2D layout viewer. Select the option "create 3D model". Animate and Change3D: Integrate external applications with the CAD application (e.g. change the length of a pipe in a 2D drawing). Create animation sequences, and then create 3D scenes that contain the newly added elements. Path and Surface Tools: Import and export of object styles: Export the style of objects as an external file (xml), which can be imported in other applications. Structure-oriented drawing: Standardization of the overall workflow, including the new path- and tool-oriented drawing functions: Let's get started. Icons are now optional. The Insert menu can be displayed in its entirety in the top bar, in Icon mode, for faster access to shortcuts (e.g. Copy, Paste, etc.). Enhanced storage You can now choose which assets and attributes you want to keep in your drawings. You can further adjust how they are stored. AutoCAD models are now always stored as Point Cloud Models. "Standard" is the default settings for the configuration of the supported icons
