Bojanke Za Odrasle Po Samo Bojanke Za Odrasle Za Printanje.Q: Creating a new collection in MongoDB Atlas I'm trying to create a new collection in the MongoDB Atlas dashboard, but I get an error: an error occurred while creating collection I've tried create a new collection and then upload documents, and also tried create a new collection and upload documents. A: According to the error message you posted, it seems like you're trying to create a collection with an authentication enabled server like the linked example does. A workaround to this is to create a new collection and populate it with some data first. Then you can connect to your collection via a different server. It's important to note that there are other ways to connect to your first MongoDB instance. These ways are explained in detail in the Documentation. You can then upload the data via \$ mongoimport --db --collection --type csv --file or \$ mongoimport --db --collection --type csv --file --username --password Or without the username and password: \$ mongoimport --db --collection --type csv --file A: You can just access the MongoDB Atlas dashboard through your browser and manually add your own collection. Go to Login to your account You should now be logged into the dashboard. Click on the Collection tab Add a new collection Good c6a93da74d
